

Service Descriptions

Acid Washing (Pools, Hot Tubs, and Fountains)

Acid washing removes stubborn stains, algae buildup, and discoloration from pool, hot tub, or fountain surfaces. This deep-cleaning process restores the original brightness of plaster, pebble, or tile finishes, making water features look fresh and inviting again.

Scale Removal

Mineral deposits (calcium and hard water scale) can build up on pool tiles, fountains, and artificial arroyos, leaving white, rough, or chalky stains. Scale removal services safely eliminate these deposits without damaging surfaces, restoring a clean and smooth appearance.

Pressure Washing (Pools, Hot Tubs, and Water Features)

High-powered pressure washing blasts away dirt, grime, algae, and surface buildup from pool decks, hot tubs, fountains, and arroyos. This service keeps water features looking clean, slip-resistant, and well-maintained.

Pressure Washing (Driveways, Patios, and Walkways)

Driveways, patios, and walkways accumulate oil stains, dirt, moss, and other debris over time. Pressure washing restores these surfaces, improving curb appeal and reducing safety hazards caused by slippery buildup.

Fountain Cleaning

Fountains require regular care to stay attractive and functional. This service includes scrubbing surfaces, removing algae and mineral buildup, and flushing the system to keep the water clear and flowing smoothly.

Artificial Arroyo Cleaning

Artificial streams and arroyos can collect debris, algae, and mineral deposits. Cleaning involves removing buildup, flushing out stagnant water, and restoring natural water flow so the feature looks and works as intended.

Wastewater Pump-Out

All services include safe removal and disposal of dirty water, debris, and waste to leave every job site clean and ready to use. This ensures no mess is left behind and protects surrounding landscaping and property.
